

MAINTENANCE AND CLEANING TIPS FOR ABS COATED ITEMS

ABS coated items require frequent maintenance and cleaning according to the use and ambient conditions. Dirtiness, certain substances or cleaning agents could cause stains, discolouration and even small rips in the coating.

We recommend to clean our ABS coated washroom accessories with neutral water and disinfectant solutions for domestic use that had been properly dissolved. These products should not contain bleach or any type of acids such as citric, sulphuric, chloridric, etc. One must not use any abrasive agents or organic solvents with acetone, trilene or oxygenated water.

The cleaning must be always done with a cotton or microfiber cloth. One must never use a sponge with metal elements, like a scourer.

Once the cleaning is over, in order to avoid that harmful substances accumulate, dry the surface with a soft, dry cloth.
