Benefits

Cutting-edge installation process

A plug and play hand dryer, making it so easy to securely attach and detach the unit from the wall. Ideal for allowing trades access at any time during a fit out. Also, should a fault occur, no need to pay and wait for someone to disconnect from the power supply. You have access to safely remove and replace the hand dryer 24 hours a day, 7 days a week.

Incredible dry times

People want the fastest dry time possible. Every user will leave the washroom with fully dried hands, in a time faster than anything they believed was possible.

Low carbon footprint and energy use

You can run this at just 420W and still provide dry times that will satisfy all user expectations. You will spend hardly anything running this unit on any setting. The environment benefits from very low carbon production when compared to other forms of hand drying such as paper towels.

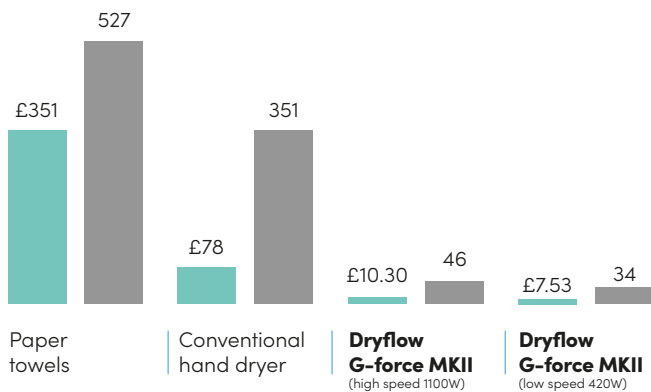

Robust, vandal resistant yet improves washroom environments

This is a unit made for places where misuse could occur, keeping your hand dryers in service. The long-life motor is protected by a cover made from thick stainless steel. The reduced sound airflow is complemented by the absorption of noisy wall vibrations via rubber blocks on the base. Odour neutraliser's can be purchased to help rid the bathroom of unwanted smells.

Adjustability at your fingertips

Personalise the unit to match any location and ongoing budget constraints. The speed of motor can be reduced to lower noise levels further. The heater element can be switched off via an internal switch, additionally reducing energy bills.

Annual cost and carbon production (Kg/CO²) for an office of 20 people*
